PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years building production TypeScript applications across SaaS and high-traffic consumer platforms. Shipped a real-time analytics pipeline on Cloudflare Workers and Analytics Engine at Enzuzo -- production TypeScript at the edge with strict performance constraints, not a tutorial project. Strong across frontend (React/TypeScript), backend (Node.js), and cloud (AWS, GCP, Cloudflare). Cut CI/CD time 90% via Turborepo and build parallelization. Build and ship with AI-native developer tooling daily -- I'm the developer the AI SDK is built for, and I want to help build it.

CORE COMPETENCIES

TypeScript / JavaScript SDK Engineering

Edge Runtime (Cloudflare Workers)

Node.js Backend & API Design

React + Modern Frontend Tools

AWS + GCP Platform Integration

CI/CD + Turborepo Monorepo

AI-Native Developer Tooling

Open Source Ecosystem (npm, TypeScript)

WORK EXPERIENCE

Enzuzo

03/2023 - Present

Senior Software Engineer - Kitchener, ON (Remote)

- **Designed and shipped a production TypeScript real-time analytics pipeline** on Cloudflare Workers and Analytics Engine -- high-performance event processing at the edge, privacy-safe by construction, serving live consent data at scale.
- Built and maintained TypeScript and React applications supporting privacy consent management, GDPR/CCPA compliance, and analytics features.
- Developed Node.js backend services and REST APIs for configuration workflows, data processing, and user-facing features.
- Executed full AWS-to-GCP migration of production workloads, improving monitoring, observability, and operational reliability.
- **Reduced CI/CD build times 90%** by restructuring a Turborepo monorepo with incremental caching and parallelized pipelines -- faster feedback loops for the whole engineering team.
- Collaborated with product and engineering teams to ship features, debug production issues, and maintain system stability.

TELL (wallpapers.com, pdfbear.com)

07/2017 - 03/2023

Senior Software Engineer - Vancouver, BC

- Developed and maintained backend services and frontend features for high-traffic consumer platforms serving **tens of millions of users**.
- Built content ingestion, processing, and delivery pipelines using TypeScript, Node.js, and SQL databases.
- Implemented SEO and performance optimizations supporting organic growth and global traffic at scale.
- Supported Linux, Docker, Nginx, and CI/CD environments for globally distributed production systems.

Nyrion

01/2013 - 06/2017

Software Engineer - Victoria, BC

- Built backend services and REST APIs for a multi-tenant SaaS platform using JavaScript, Node.js, and SQL databases.
- Developed background jobs and data workflows supporting multiple product features.
- Built testing and QA tooling to reduce regressions and improve release stability across the team.
- Improved application performance and deployment workflows through refactoring and automation.

EDUCATION

B.S., Software Engineering — [University of Victoria](#)

2016 — Victoria, BC

SKILLS

Languages: TypeScript, JavaScript, SQL **Frontend:** React, modern frontend tooling **Backend:** Node.js, REST APIs, PostgreSQL, MySQL, Redis
Cloud: AWS, Google Cloud Platform (GCP), Cloudflare Workers, Cloudflare Analytics Engine **DevOps:** Docker, CI/CD, Turborepo, Linux, Nginx
Tooling: npm, monorepo architecture, open source ecosystem
