PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering end-to-end TypeScript features across production SaaS and high-traffic web platforms. Full-stack background in React, Node.js, and modern web architecture -- including real-time data pipelines on Cloudflare Workers and REST API services supporting complex, customer-critical workflows. Shipped integrations with multiple third-party providers at Enzuzo; maintained systems serving tens of millions of users at TELL. Ship production TypeScript daily, including inside Claude Code on Vercel's infrastructure. Focused on reliable, well-tested feature delivery where TypeScript craftsmanship and product quality intersect.

CORE COMPETENCIES

TypeScript / JavaScript

React & Next.js

Node.js Backend Services

REST API Design

Third-Party Integrations

Cloudflare Workers & Edge

AWS / GCP Infrastructure

CI/CD & Developer Tooling

WORK EXPERIENCE

Enzuzo

03/2023 -- Present

Senior Software Engineer -- Kitchener, ON (Remote)

- Built and maintained production TypeScript and React applications -- delivering end-to-end features across UI, Node.js backend services, and Cloudflare Workers, including third-party provider integrations and event-driven lifecycle workflows.
- Developed Node.js REST APIs supporting complex configuration workflows, data processing, and customer-critical user flows with robust data modeling.
- Implemented real-time data pipelines using Cloudflare Workers and Analytics Engine to process high-volume event data; integrated with external consent management providers via TypeScript adapter layer.
- Overhauled CI/CD pipeline using Turborepo -- cut build times by 90% through parallelization and incremental caching; improved deployment reliability and added structured instrumentation.
- Supported cloud services across AWS and GCP; contributed to reliability, monitoring, and operational improvements across production infrastructure.
- Partnered with product and engineering to ship features, debug production issues, and maintain stable, well-tested systems at pace.

TELL (wallpapers.com, pdfbear.com)

07/2017 -- 03/2023

Senior Software Engineer -- Vancouver, BC

- Built and maintained backend services and frontend features for high-traffic consumer platforms serving tens of millions of users -- full-stack TypeScript and Node.js across the entire product.
- Developed content ingestion, processing, and delivery pipelines integrating with third-party content providers and lifecycle notification systems; drove SEO architecture and performance optimization for global organic traffic.
- Designed and shipped REST API services supporting complex user workflows and data processing at scale.
- Refactored and maintained production infrastructure to improve reliability, deployment workflows, and operational efficiency across Linux, Docker, and Nginx environments.

Nyrion

01/2013 -- 06/2017

Software Engineer -- Victoria, BC

- Built backend services and web applications for a multi-tenant SaaS platform -- REST APIs, background jobs, and data workflows supporting multiple product features.
- Improved application reliability and deployment workflows; contributed to testing and QA tooling to reduce regressions and improve release stability.

PROJECTS

Real-Time Consent Analytics Pipeline Production

End-to-end feature at Enzuzo: React UI, Node.js API, and Cloudflare Workers ingesting high-volume consent events into Cloudflare Analytics Engine. Privacy-safe by construction; integrates with multiple third-party CMP providers via TypeScript adapter abstraction.

TypeScript, Cloudflare Workers, Analytics Engine, React, Node.js

AWS-to-GCP Infrastructure Migration Production

Full migration of Enzuzo's production workloads from AWS to GCP, including monitoring, alerting, and operational improvements. Zero customer-facing incidents during transition.

AWS, Google Cloud Platform, CI/CD, Infrastructure as Code

Turborepo CI/CD Overhaul Internal Tooling

Redesigned Enzuzo's monorepo build and test pipeline using Turborepo. Parallelized test suites, added incremental caching, and automated deployment steps. Result: 90% reduction in build time; improved deploy confidence and developer iteration speed.

Turborepo, TypeScript, CI/CD, Node.js

EDUCATION

B.S., Software Engineering — University of Victoria

2016

Victoria, BC, Canada

SKILLS

Languages: TypeScript, JavaScript, SQL **Frontend:** React, Next.js, HTML/CSS **Backend:** Node.js, REST APIs, PostgreSQL, MySQL, Redis

Cloud: AWS, Google Cloud Platform, Cloudflare Workers / Analytics Engine / KV **DevOps:** Docker, Linux, Nginx, CI/CD, Turborepo
